Triple offset – for challenging applications!

What is “triple offset”? The rotating shaft of the disc is offset from the centre line of the disc seat and body seal (first offset) and the pipe’s centre line (second offset). With triple offset process valves, the seat’s axis of rotation is also asymmetrically apposed to the pipe axis (third offset).

Benefits for you
- Frictionless swivel movement.
- Permanently leak-proof due to the metal seal principle.
- Versatile applications with regard to media and temperature.

Centric disc design – The pivot point is centrally disposed to both the seat and the pipe.

① First offset – The rotating shaft of the disc is offset from the centre line of the disc seat and body seal.

② Second offset – The pivot point is also displaced from the pipe’s centre line.

③ Third offset – The seat’s axis of rotation is also asymmetrically apposed to the pipe axis.

Reliably tight – even in harsh industrial environments

- Due to the triple offset disc design (maximum closing force with minimum effort).
- Due to the “smart” sealing ring (uniform closing force, the ring is self-aligning and free-floating on the sealing surface).
- Due to a wide range of additional safety options.
- Due to the stellited seat (Stellite No. 21).
- Due to the metal seal principle.
- Due to the metal seal principle.

Design

- Body acc. to EN 12516, ASME B16.34 and API 609.
- Tight metal shut-off.
- Triple offset sealing geometry.
- Flexible, self-aligning, lamellar metal sealing ring (floating).

Self-aligning sealing ring facilitates thermal compensation and ensures tightness regardless of temperature variations.

Lamellar structure made of stainless steel and graphite lends additional elasticity to the sealing ring, which can be exploited as a function of the temperature.

Triple offset design guarantees a frictionless rotary movement of the sealing ring into the seat.

Optimised characteristic permits shut-off and control function.

Optimum durability because even the standard version has a stellited seat.

Safety

- Tightness conforming to leakage rate A in accordance with EN 12266, API 598 and API 6D (bidirectional).
- Bearing protectors.
- Blow-out protected stem.
- Retaining ring and thrust bearing bolts locked.
- Pressure-temperature profile acc. to EN 1092, ASME B16.34.
- Approvals: Firesafe, TA-Luft / ISO 15848-1, SIL, ATEX.

Durability

- Long and maintenance free service life due to the stellited seat.
- Rotary movement without wear or friction (seat and sealing ring) due to the optimised contact angles.
- Hardened stainless steel bearings.

NEW from ARI: With buttweld ends!

NEW from ARI: With butt-weld ends!

Performance features at a glance:

- **Design:** EN 12516, ASME B16.34, API 609
- **Flange connection:** EN 1092, ASME 16.5, ASME 16.47
- **Butt-weld ends:** DIN EN 12627, ASME B16.25
- **Nominal diameter:**
  - Double flange: DN 80-1200 / 3" to 48"
  - Fully lugged: DN 80-600 / 3" to 24"
  - Butt-weld ends: DN 80-600 / 3" to 24"
- **Nominal pressure:**
  - PN 10-40, PN 63, PN 100 / Class 150, Class 300, Class 600
- **Face to face:**
  - Double flange: DIN EN 558-1 Series 13, ISO 5752, API 609
  - Fully lugged: DIN EN 558-1 Series 16, ISO 5752
  - Butt-weld ends: DIN EN 558-1 Series 14, ISO 5752
- **Material:**
  - Cast carbon steel (1.0619 +N; SA216WCB)
  - Cast stainless steel (1.4408; SA351CF8M)
- **Temperature:** -60°C to +427°C
- **Flow media:** Liquids, gases, vapours
- **Actuators:**
  - Manual gearbox, pneumatic, electric, hydraulic drives
- **Approvals:** Firesafe, TA-Luft / ISO 15848-1, SIL, ATEX
- **Typical applications**
  - Oil and gas processing, refineries, petrochemicals, chemicals, power plants, district heating, solar thermal power stations, pulp and paper, steelworks, sugar processing, industrial and plant manufacturing — reference list on request.
* Other designs on request

Options:

- Flushing port for the shaft bearings and buffer port for protecting the stuffing box
- Flushing port for the bottom flange
- Welded bottom flange
- Double packing with drainage line (e.g. for thermal oil services)
- Test port
- “Clean air” bushing acc. to TA-Luft / ISO 15848
- Solid sealing ring for special applications
- Heating jacket
- Blow-out protection acc. to API 609
- RTJ / tongue-and-groove flange

* Other designs on request
Modern development methods, tested in our own experimental lab

Finite element analysis
The finite element analysis (FEA) is a numerical calculation technique that was used to simulate the stresses and their distribution occurring in the ZETRIX® process valve. The aim was to achieve the required strength at pressure load levels in combination with an optimal weight and a flow friendly shape.

State-of-the-art flow simulations
The twofold objective of uniform flow and high flow capacity was realised with the aid of special flow software. The software simulations enable the flow velocity, flow direction and pressure distribution to be visualised. Due to the optimised ZETRIX® geometry, turbulences and pressure loss are reduced to a minimum.

Rigorous tests (here: fire safe)
“Firesafe” is a basic stipulation in many of the environments where the ZETRIX® process valve is used. As a triple offset process valve with a tight metal seal, ZETRIX® meets all requirements before, during and after the fire. The test was performed according to ISO 10497 / API 607 6th edition.

Characteristic measurements
The flow values at different opening angles were measured in an accredited testing laboratory. The resulting curves were used to determine the control characteristic of the ZETRIX® process valve.

Contact angle calculation
The peripheral closing angle was optimised to ensure that the valve opens and closes without sticking and without friction. Our sizing software allows the contact angle at the perimeter of the ZETRIX® process valve to be visualised.
High-precision manufacturing

Modern technologies are the key to optimal safety and reliability. Our products are manufactured at three different locations—all of them in Germany—promptly and according to rigorous quality criteria. High-performance machining centres, automated assembly cells, programmable assembly robots and a highly qualified team of staff are vital prerequisites of top-quality product solutions specially tailored to your individual requirements.

The benefit for you: Optimal reliability and efficiency.

The valve bodies are manufactured on fully automated, CNC controlled machining centres. Our CNC programs are written on the basis of CAD data and transferred to the control online. The workpieces are clamped in specially designed fixtures that guarantee maximum machining stability and short set-up times.

The sealing surface is coated with stellite by a fully automatic welding robot with an integrated measuring system. All CNC programs are developed by our expert in-house programmers. Synchronising the eight axes of the welding system represents a particular challenge.

The three-dimensional measuring system allows the process valves to be compared with 3D data, which is subsequently evaluated and saved on a PC. The measurements are carried out directly in the machine to ensure reliable production processes.

Every ZETRIX® process valve is leak-tested according to DIN EN 12266. The test pressures and times are stored on our computer aided test bench. Special tests can also be performed at the customer’s request.
Technology is our life
Highly qualified ARI engineers develop products for tomorrow’s world using the very latest techniques. Our suppliers are selected according to the strictest possible criteria, to ensure that only premium quality materials are used. Our state-of-the-art production technologies leave no room for mistakes.

Thanks to our dense sales network, expert advice is available from a sales partner close to you in more than 60 countries worldwide as well as from ARI branches in Austria, Denmark, the UK, France, Spain, Italy, Russia, the USA, Brasil, India, China, Malaysia, Singapore and Dubai.

Are you a professional user of high-quality, heavy-duty valves? Would you like to reap the benefits of a strong partner? Our mission is to help you maximise your profit.

Tailor-made solutions
20,000 products in more than 200,000 variants mean almost unlimited possibilities depending on your application, with solutions specially tailored to your individual requirements.

Control valves, pressure reducing valves, pressure regulators, temperature controllers without auxiliary power, butterfly valves, globe valves, safety valves, steam traps, measuring technologies and accessories such as pressure reducing stations, heat exchangers, condensate return systems and condensate pumps – your key to maximum flexibility and efficiency.

For control – isolation – safety – steam trapping – application technology.
ARI product diversity

**Control**
- Control valve
  - STEVI® Pro (Series 422/462, 470/471)
- STEVI® Vario (Series 448/449)
- STEVI® Smart (Series 423/463, 425/426, 440/441, 450/451)
- Control without auxiliary power
  - PREDU® / PREDEX® / PRESO® / TEMPTROL®

**Isolation**
- Process valve
  - ZETRIX®
- Butterfly valve
  - ZIVA®
- Bellows sealed valve
  - FABA® Plus, FABA® Supra I/C
- Stop valves with gland seal
  - STOBU®

**Safety**
- Safety valves (DIN/EN)
  - SAFE
- Safety valves (DIN/EN)
  - SAFE TCP
- Safety valves (API 526, ASME)
  - ARI-REYCO™
- Safety valves (ASME)
  - ARI-REYCO™ RL-series

**Steam trapping**
- Steam traps CONA® (mechanical ball float / thermostatic bimetallic and membrane / thermodynamic), monitoring systems
  - CONA® Control
- Manifolds
  - CODI® for collecting and diverting purpose
- Steam trap with multi-valving technology
  - CONA® “All-in-One” (incl. stop valve, inside strainer, back-flow protection, drain valve)
- Mechanical pump systems
  - CONLIFT®, CONA® P
